OZONE OBSERVATIONS

The table of ozone values of Tromsø covers 9 months and that of Longyear Svalbard (78.2° N) only 7 months.

Sky-observations are possible at Tromsø the whole year and at Longyear say 10 months, but the evaluation of values during the polar night period is too doubtful to be trusted in.

All observations were taken with Dobson Spectrophotometers, at Tromsø by Søren H. H. Larsen and at Longyear by H. Welde.

EARTH MAGNETISM 1954, TROMSØ

GENERAL REMARKS

The instrumental equipment used for the magnetic measurements and registrations is the same as that previously used, a description of which is given in No. 1 and No. 33 of the present series of publications.

The observations were made by S. Berger and the calculation work by Anna Østvik.

SCALE-VALUES

The following scale-values were determined:

D — curves: 1'.50 or 4.88 γ per mm.
 H — curves: 5.38 γ per mm.
 V — curves: 7.25 γ per mm.

BASE-LINE VALUES

The determinations of the base-line values resulted in the table given below.

The quiet mean Inclination value for 1954 was calculated to 77° 34'.2.

The temperature coefficient for the H-variometer is 8.7 γ , and for the V-variometer \pm 2.3 γ per degree Celcius.

EXPLANATION OF THE TABLES

For each of the components D , H and V two series of tables are given. One series gives, in the usual way, the hourly mean values centered at half hours Gr. M. T. In these tables the column headed M gives the ordinary diurnal means. R designates the range, i. e. the difference between the maximum and minimum value measured on the magnetogram. The horizontal line marked M gives the monthly means of the hourly values, and the line marked QM gives the monthly means of the *quiet* hourly values.

The second series of tables gives the hourly values of the Storminess («average perturbing force» or «activity»). As to the definition of the storminess and the method for separating it, we refer to No. 2 and 4 in the present series of publications. In the storminess tables the column headed M gives the diurnal means. The columns headed PS , NS and AS give the diurnal sum of the positive, negative and absolute storminess respectively. The column headed CH gives the magnetic character numbers. We consider the diurnal sum of the absolute storminess as the best expression for the magnetic activity during a day and we will use that quantity for defining the character numbers. Only the strongest perturbed component, the Horizontal Intensity, is used in characterisation. Character number 0 comprises diurnal sum of absolute storminess (AS) up to 400γ , character number 1 from 400γ to 1200γ and character number 2 greater than 1200γ . The horizontal line marked M contains the monthly means of the hourly values, and the two lines marked MPS and MNS give the monthly means of the positive and negative storminess respectively.

In D the storminess is reckoned positive towards magnetic west, in H positive towards magnetic north, and in V positive downwards.

In addition to the main tables, resuming tables, figures and vector diagrams are given at the end of the year-book.

EARTH MAGNETISM 1954, BEAR ISLAND

($\varphi = 74.5^\circ$ N., $\lambda = 19.2^\circ$ E)

Some measurements with QHM 123 and BMZ 57 were taken by S. Berger during an inspection period 27/6 — 12/7 1954. According to these measurements we may give some approximate annual values for 1954.

$$D = 2^\circ \text{ E. } H = 9180\gamma \text{ } V = 51970\gamma.$$

For comparison we print the K-indices of Bear Island and Tromsø side by side.

GENERAL REMARKS.													Critical Frequency for the E-layer, foE. Quantities Expressed in Mc/s. MONTHLY MEDIAN VALUES FOR EACH HOUR MET																								
The instrumental equipment used for the measurements is the Mark II NPL-recorder described in the Proc. I E E, Vol. 98, Part III, p. 11, 1951.													0	1	2	3	4	5	6	7	8	9	10	11	0	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
Assistant HEIDULF LARSEN was responsible for the maintenance and processing of the films. The reading of the hourly values and the calculation work has been performed by Mr. SIOBJØRN SKRIEHLAND, head of the Radio Wave Propagation Bureau of the Norwegian Defence Research Establishment at Kjeller.													-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
