THE AURORAL OBSERVATORY

TROMSØ

NORWAY

**MAGNETIC OBSERVATIONS
1974**

INTRODUCTION

This yearbook presents the results of the geomagnetic measurements carried out at The Auroral Observatory, Tromsø, Norway. The Observatory is now an institute at The University of Tromsø. Inquiries can be addressed to:

The Auroral Observatory
P.O. Box 953
N-9001 TROMSØ, Norway.

The Observatory is situated 2 km NW from the centre of the town. The geographical coordinates are:

Latitude: $69^{\circ}39'.7$ N Longitude: $18^{\circ}56'.4$ E

Altitude: 105 m above sea level.

Instrument Equipment

The values of hourly means etc. are based on photographic records from the following three variometers: D and H of the Askania-Bamberg type and a Z-variometer of the type La Cour.

Insensitive recordings of the three elements are obtained by a modified La Cour system.

Pulsations recordings are obtained by a Grenet system.

The following instruments have been used for base-line control: Askania theodolit and a double magnet suspended in a silk-thread for D-measurements, for H-measurements QHM 123 and QHM 164, and for Z-measurements BMZ 39 and BMZ 57. From 1975 will a GeoMetric G 826 protomagnetometer be used for Z-base line control.

Scale value determinations

The scale value of the variometers are determined by means of Helmholtz coils. The values are as follows expressed in

units pr. mm:

	D	H	Z
Normal:	1',45	5,28 nT	6,57 nT
Storm:	3',0	22,2 nT	24.0 nT

Notes to the tables

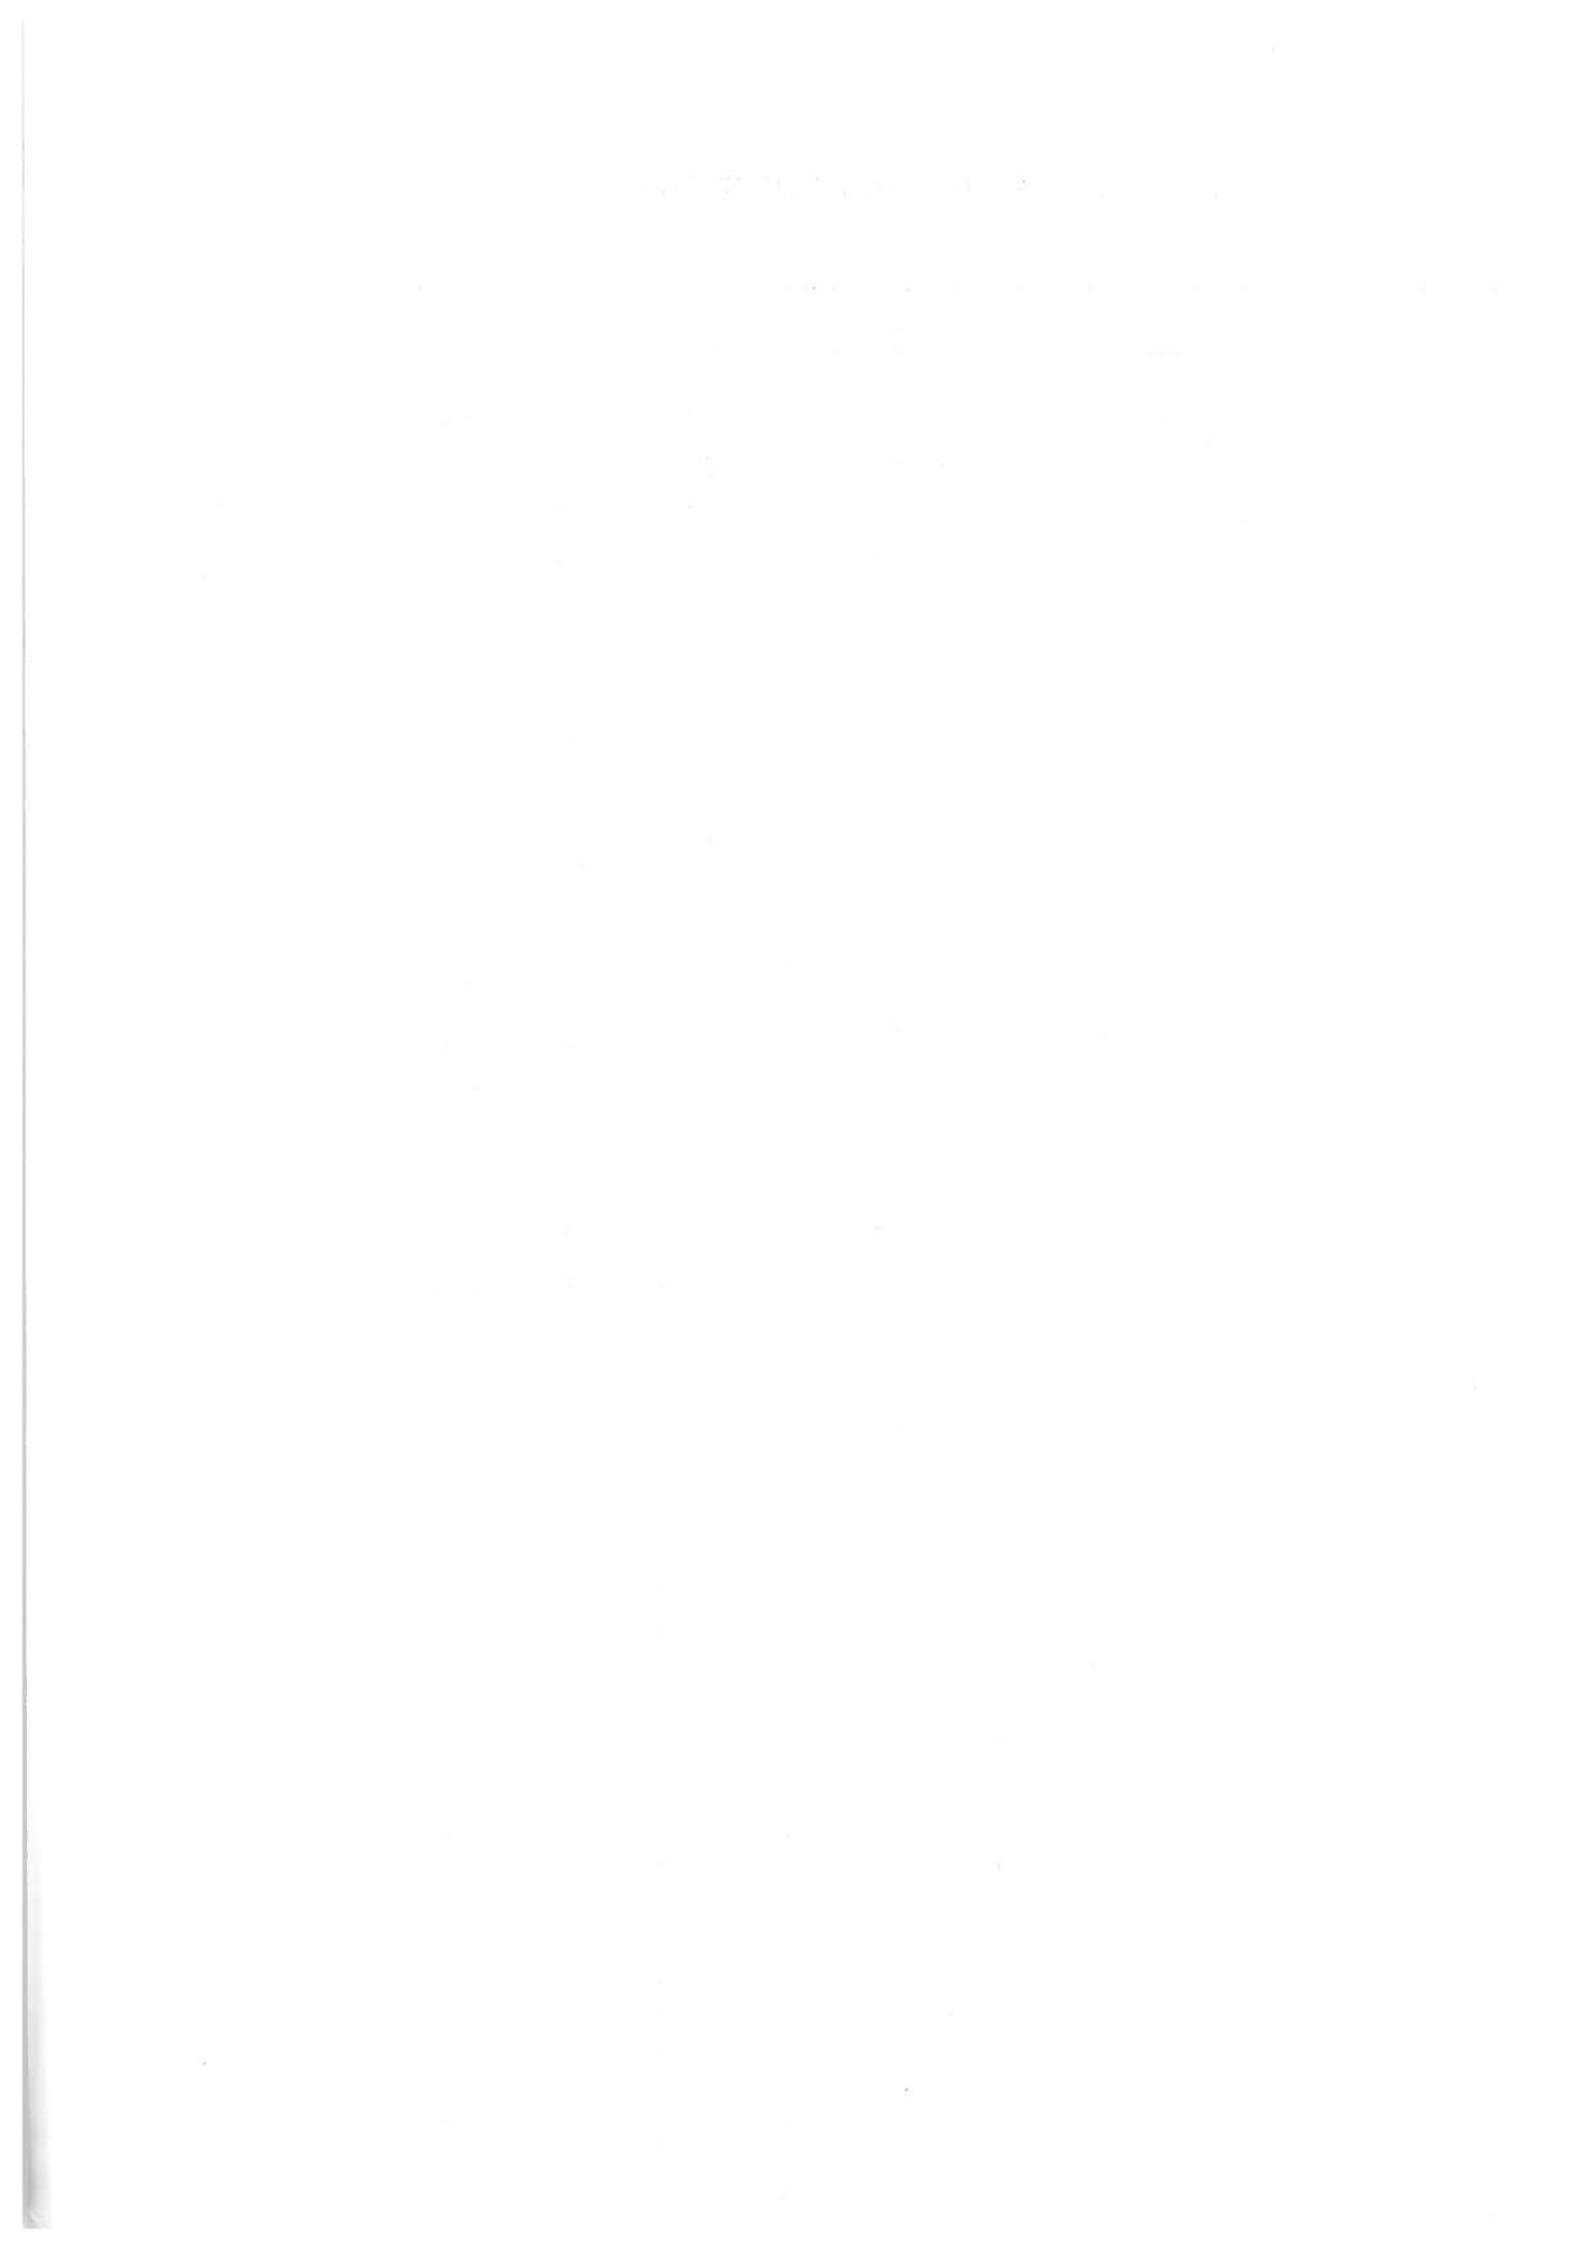

The hourly mean values are centered on the half hours. The quiet mean values are estimated from selected quiet hours only.

Universal time is used everywhere in this yearbook, and the declination is reckoned positive towards west.

Stars in the tables indicates that the values are greater than - 999.
